

Karpowership continues to work with engines from MAN Diesel & Turbo

Augsburg, 05/07/2017

Turkish global market leader for powerships places another major order

The Turkish energy company Karpowership has placed an order for a total of 38 engines of the type MAN 51/60. 18 of the units will be multi-fuel engines, which can be run on gas or liquid fuel. Another 20 are pure gas engines, including the MAN 18V51/60G TS, currently the most powerful and efficient gas engine in the world. The engines each have a power output of 18.5 - 20.4 MW, and deliveries are due to start later this year. Installation and commissioning will take place in 2017 and 2018. The total volume of the order is in the 3-digit million range.

The engines will be employed in Karpowership's powership fleet. "Powerships perform an important function in the Power Generation segment. They quickly and reliably make power available, which not only enables economic growth but also secures the livelihood of millions of people around the world," explains Wayne Jones, Chief Sales Officer of MAN Diesel & Turbo. "We are proud to open a new chapter of our partnership with Karpowership, a strong relationship that now spans nearly ten years."

Karpowership is the world's only company that operates a whole fleet of powerships. A total of 13 ships currently generate a total capacity of more than 2.7 gigawatts. Further ships with a power capacity of 5.3 GW are currently under construction. Countries where ships with MAN engines are in operation include Lebanon and Mozambique.

About MAN Diesel & Turbo

MAN Diesel & Turbo SE, based in Augsburg, Germany, is the world's leading provider of large-bore diesel and gas engines and turbomachinery. The company employs around 14,500 staff at more than 100 international sites, primarily in Germany, Denmark, France, Switzerland, the Czech Republic, India and China. The company's product portfolio includes two-stroke and four-stroke engines for marine and stationary applications, turbochargers and propellers as well as gas and steam turbines, compressors and chemical reactors. The range of services and supplies is rounded off by complete solutions like ship propulsion systems, engine-based power plants and turbomachinery trains for the oil & gas as well as the process industries. Customers receive worldwide after-sales services marketed under the MAN PrimeServ brand.
